

Robot Readiness Scan

Is your company ready for a humanoid robot? Tick the boxes and count your score.

1. The task

- The task recurs daily or weekly in a recognisable pattern
- Start, steps and finish fit on one sheet of paper
- The task doesn't require human-level fine motor skills
- Errors in the task are measurable (waste, rework, complaints)
- The task currently costs overtime, temp workers or unfilled vacancies

2. The site

- The workplace is accessible to a person (doors, paths, no ladders)
- There is stable Wi-Fi coverage in the work area
- A power point is available for charging
- The floor is level and free of loose obstacles
- There is room to set up a safety zone

3. The team

- There is an internal owner who can drive the pilot
- The floor team is informed and involved in the idea
- Current-state KPIs are known or measurable
- There is willingness to run a 2–6 week pilot
- Management supports a trial with fixed scope and price

Your score

12–15 yes

You're ready. A pilot can start almost immediately — book an intro call and we'll scope it together.

8–11 yes

Solid foundation. The missing items are usually solvable in one preparation week; happy to help think it through.

0–7 yes

Not yet — and that's valuable knowledge that cost you nothing. Start with task selection: our knowledge base helps.

Next step

Book a free 30-minute intro call. You'll get a straight answer on whether a pilot makes sense — fixed scope and price, no obligation.
